

Appendix 10. Evidence tables and study quality evaluations of epidemiological and toxicological studies reporting inhalation exposures to vanadium compounds

Tab	Contents
Epi Evidence Table	This tab contains a break down of the study design and endpoints of the epidemiology studies that met the inclusion criteria and that were extracted in HAWC
Epi Study Quality Heatmap	This tab contains a figure downloaded from HAWC summarizing the study quality evaluation results for each of the relevant epi studies extracted in HAWC
Animal Tox Evidence Table	This tab contains the data from the study design and endpoints of the animal toxicology studies that met the inclusion criteria and that were extracted in HAWC.
Animal Study Quality Heatmap	This tab contains a figure downloaded from HAWC summarizing the study quality evaluation results for each of the relevant animal toxicology studies extracted in HAWC. If a study conducted separate full experiment (e.g. NTP 2002), those experiments received their own study quality score. Only studies with multiple dose groups were evaluated for study quality.
